

## Mathematics Beliefs

The Waterloo Region District School Board (WRDSB) values mathematics as an essential skill that all students must learn. A high level of mathematics achievement is possible with appropriate learning conditions and supports. To achieve these high levels, the WRDSB believes:

- All students can learn mathematics,
- In a comprehensive mathematics program promoting a growth mindset, problem solving, consolidation through practice and the integration of skill development,
- In collaboration that enables students to communicate their mathematical thinking while engaging with peers to deepen understanding,
- In applying principles of Assessment for Learning to promote mathematics learning for all.

By engaging educators, parents and families, and embracing these beliefs, we will strive to ensure all WRDSB students learn essential mathematics skills. This will empower our students to pursue, understand and apply mathematical reasoning in the world around them.

Resources supporting these beliefs are available for students, educators, parents and families by selecting the following links:
